SUMMARY

Senior Full-Stack Developer with 9+ years of professional software development experience designing and delivering scalable, high-performance enterprise applications using React, Node.js, TypeScript, JavaScript, GraphQL, REST APIs, MySQL, PostgreSQL, and MongoDB. Strong expertise in micro-frontend architecture, microservices, event-driven systems (Kafka, RabbitMQ), API design, and real-time data processing, with experience in AWS, Docker, Kubernetes, and CI/CD pipelines. Experienced in leveraging GitHub Copilot, Claude, and Cursor to improve development productivity and code quality. Expanding expertise in Generative AI, Retrieval-Augmented Generation (RAG), LLM integration, Python, FastAPI, OpenAI APIs, embeddings, and Qdrant vector search, with an interest in applying these technologies to clinical trial protocol assistance and enterprise knowledge retrieval. Proven ability to contribute to technical design decisions, mentor developers, and deliver maintainable solutions across healthcare, energy, banking, insurance, and retail domains. Based in Vilnius, Lithuania, with a valid Lithuanian Temporary Residence Permit (TRP), full authorization to work in Lithuania without visa sponsorship, and immediate availability.

EXPERIENCE

Principal Engineer | Healthcare IT

10/2024 - 08/2026

Wipro (formerly HARMAN Connected Services Corp. India Pvt. Ltd.) Bengaluru, India

- Architected a full-stack clinical trial platform using React, Redux Toolkit, Redux-Saga, Node.js, Express.js, and MongoDB, improving data validation, accuracy, and application efficiency.
- Led the implementation of a micro-frontend architecture, enabling parallel development, independent deployments, and improved collaboration across multiple teams.
- Led the development of Node.js microservices integrated with RabbitMQ, enabling asynchronous communication, event-driven workflows, and scalable clinical trial data processing.
- Designed and integrated frontend and backend workflows for complex clinical business rules, ensuring a scalable, maintainable, and reusable application architecture.
- Exploring a Retrieval-Augmented Generation (RAG) solution for clinical trial protocol assistance, using Python, FastAPI, OpenAI embeddings, and Qdrant vector search to retrieve relevant protocol sections and support context-grounded answers with source references.
- Designed the proposed AI workflow to support protocol queries, evidence-based information retrieval, and source traceability, with the goal of reducing manual document searches while keeping clinical decisions subject to human review.
- Mentored software engineers through code reviews, technical design discussions, sprint planning, task allocation, and Agile engineering practices.
- Leveraged Cursor, Claude, and GitHub Copilot to accelerate development, improve code quality, and reduce repetitive engineering tasks.
- Collaborated with DevOps and platform teams on CI/CD pipelines, deployments, and release processes using GitLab, AWS, Docker, and Kubernetes, supporting reliable application delivery.

Senior System Analyst | Energy, Insurance & Banking

09/2021 - 10/2024

IBM India Private Limited Bengaluru, India

- Developed the Open Balancing Platform for National Grid using React, TypeScript, Redux Toolkit, Node.js, GraphQL, REST APIs, and Amazon S3, supporting real-time energy demand–supply balancing and secure storage of operational data and reports
- Built the IFRS 17 Data Platform using React, Node.js, TypeScript, Kafka, KSQL, microservices, and REST APIs for real-time insurance data streaming and scalable processing
- Delivered the Investor Advisory Portal using React, Redux Toolkit, Node.js, Express.js, REST APIs, Material UI, and Postgres SQL, providing portfolio-management workflows and interactive dashboards
- Deployed, troubleshot, and validated AWS-based application environments using Docker, Kubernetes, Terraform, and GitHub workflows in collaboration with DevOps and platform teams
- Mentored five developers through code reviews, technical design, sprint planning, and Agile/Scrum ceremonies

EDUCATION

Master's in Engineering of Artificial Intelligence - In Progress

VILNIUS TECH (Vilnius Gediminas Technical University)

2026 - Present Vilnius, Lithuania

Bachelor of Engineering in Computer Science

Visvesvaraya Technological University (VTU)

06/2009 - 06/2013 Karnataka, India

SKILLS

Frontend

React · TypeScript · JavaScript (ES6+) · Redux Toolkit · Redux Saga · HTML5 · CSS3 · Material UI · Webpack · SCSS

Backend & APIs

Node.js · Express.js · GraphQL · REST APIs · PHP · Laravel · CodeIgniter · Python

AI Backend

Python · FastAPI · Pydantic · REST API Integration · OpenAI API · Vector Databases (Qdrant)

Data & Messaging

MySQL · MongoDB · Redis · Kafka · KSQL · Elasticsearch · RabbitMQ

Architecture

Micro-Frontends · Microservices · API Integration · Real-Time Applications · Scalable Web Architecture

Cloud & DevOps

AWS · Azure · Docker · Kubernetes · Terraform · GitHub · GitHub Actions · GitLab · CI/CD · Datadog · Splunk · Grafana

EXPERIENCE

Senior System Analyst | Retail
01/2019 - 09/2021

Sonata Software Limited — Bengaluru, India

- Managed full-stack development of the MFL Booking e-commerce platform using React, Redux, Node.js, Express.js, Redis, Elasticsearch, JavaScript, HTML5, CSS3, Webpack, and REST APIs
- Improved order-processing performance through React UI enhancements, Node.js backend optimization, and API performance tuning
- Led end-to-end delivery for two enterprise clients, collaborating with stakeholders on requirements, change requests, UAT, and Agile feature delivery
- Designed scalable microservices using Node.js, AWS Lambda,RDS MySQL AppSync (GraphQL), and S3, enabling serverless API orchestration, secure file storage, and consistent data delivery across web, mobile, and multiple client devices
- Worked with DevOps teams on GitHub-based CI/CD deployment processes and automated smoke testing, improving release stability and reducing post-deployment defects

Senior Software Developer | Enterprise Technology
06/2018 - 01/2019

Cryptograph Technologies Pvt. Ltd — Bengaluru, India

- Developed and enhanced the Vendor Inquiry Tool using CodeIgniter, PHP, MySQL, and JavaScript, improving vendor data accessibility and operational efficiency
- Refactored and modernized application components using PHP, MySQL, HTML5, CSS3, and jQuery, reducing technical debt and improving maintainability
- Collaborated with cross-functional teams to deploy and support enterprise applications using IBM Cloud

Software Engineer | Digital Marketing
08/2016 - 06/2018

Theorem — Bengaluru,India

- Engineered the PayPal APAC Lifecycle Email Builder using Laravel and PHP, empowering non-technical teams to efficiently create and manage scalable HTML email campaigns, enhancing operational efficiency and user engagement.
- Built responsive front-end, back-end services, and RESTful APIs for campaign creation, scheduling, reporting, and data management.
- Collaborated with PayPal APAC stakeholders, BA's, designers, and QA to deliver features in Agile Scrum two-week sprints.
